

Course Descriptions Master 2013-2014

Course Title Theories and models of learning
 Course Code EBC4102
 ECTS Credits 6,5
 Assessment None

Period	Start	End	Mon	Tue	Wed	Thu	Fri
2	28-10-2013	20-12-2013	X			X	X

Level Advanced
 Coordinator Wim Gijsselaers For more information:w.gijsselaers@maastrichtuniversity.nl
 Language of instruction English

Goals
 What is expertise and how is it developed? How do people acquire knowledge and skills (learning)? What are the specific characteristics of adult learning? And how is this related to workplace learning? These questions are addressed in this course. In this course period, theories and insights of learning of individuals, groups and teams in Organisations are studied from three perspectives:
 - A framework of Expertise based on a cognitive psychological perspective: What is expertise? Who is an expert? What kind of frameworks are available to research expertise?
 - Mechanisms of Development of Expertise. A Learning Sciences perspective on how training and practice can leverage expert performance.
 - Understanding how to set and articulate Organisational goals that maximize learning opportunities, and create opportunities to improve exchange of expertise in teams and networks.

Generic Competences: scientific knowledge, awareness of broader context, academic reasoning, problem-solving skills, learning skills, self-management skills, communication skills, interpersonal & team-working skills, leadership

Description
 The present course deals with the issue how human performance is determined by expertise. It centers on the pivotal role of understanding how people learn and acquire expertise in a domain. It represents an effort to develop sophisticated theories and models which can serve as the foundation of training design and delivery, and provide enhanced understanding of the changing nature of work and the strategic value of learning for Organisations. It discusses research on the nature of knowledge, the underlying learning processes, and how learning can be leveraged at multiple levels: individual, team and network. It questions how Organisations can promote expertise as the outcome of motivation, social conditions within an Organisation, and the design and delivery of training.
 - Insights in characteristics and development of expertise: How do experts develop at work?
 - Insights in characteristics of the workplace that contribute to expertise development, and sharing of expertise.
 - Provision of skills and methods that forecast how expertise will develop, and how expertise is shared in Organisations.
