

## Course Descriptions Exchange 2013-2014

Course Title Asset Pricing  
 Course Code EBC4208  
 ECTS Credits 6,5  
 Assessment None

Period	Start	End	Mon	Tue	Wed	Thu	Fri
1	2-9-2013	25-10-2013		X		X	

Level Advanced  
 Coordinator Peter Schotman For more information:p.schotman@maastrichtuniversity.nl  
 Language of instruction English

Goals Students learn to apply mathematical tools to model economic problems, to develop the theoretical framework of microeconomics and to prove its results.

Description Asset Pricing deals with the valuation of financial securities. Most of this course follows the textbook Asset Pricing by John Cochrane. The main topic of the book is valuation of any kind of financial instrument within the unified framework of stochastic discount factors. The first, and largest, part of the course covers part I of the book and deals with many of the standard theory tools in asset pricing. This part of the course introduces concepts like the stochastic discount factor, no-arbitrage, factor pricing models, complete markets, equilibrium asset pricing, beta-pricing models, risk neutral valuation, contingent claims, mean-variance analysis, intertemporal asset pricing, conditional asset pricing, spanning, Hansen-Jagannathan bounds. The second part of the course follows part III of the book and deals specifically with the valuation principles for derivative securities like options and fixed income instruments. This part applies the stochastic discount factor techniques in continuous time models. The final part of the course considers applications in recent research papers.

Literature Asset Pricing by John Cochrane, revised first edition, Princeton University Press, 2005.

Prerequisites Strong quantitative background, either from a bachelor in econometrics, first year courses in the research master program, or equivalent quantitative skills.

Teaching methods PBL / Presentation / Lecture / Assignment  
 Assessment methods Final Paper / Attendance / Participation / Written Exam
