

Course Descriptions NonDegree 2013-2014

Course Title	Optimisation							
Course Code	EBC2105							
ECTS Credits	6,5							
Assessment	None							
Period	Period	Start	End	Mon	Tue	Wed	Thu	Fri
	1	2-9-2013	25-10-2013	X		X		X
Level	Intermediate							
Coordinator	Stan van Hoesel For more information:s.vanhoesel@maastrichtuniversity.nl							
Language of instruction	English							
Goals	In this course the student will learn to solve both linear and non-linear constrained optmization problems.							
Description	Optimisation problems arise in all fields that econometricians encounter, such as operations research, game theory, statistics, micro- and macroeconomics and finance. The aim of this course is to show the methodology for solving constraint optimisation problems both for linear and non-linear problems. These methodologies are also known as Linear and Non-Linear Programming, respectively. The following topics and techniques will be treated: the standard simplex method, duality, sensitivity analysis, the primal-dual simplex method, the network simplex method, first and second order necessary and sufficient conditions, the Lagrangian-function, Kuhn-Tucker conditions and constraint qualification. Besides this, special attention is paid to the application of these methodologies in practical problems.							
Literature	Course book. Vanderbei, R.J., Linear Programming: Foundations and Extensions, 2nd ed., Kluwer Academic Publishers, 2001 (ISBN 0792381416 or ISBN 0792373421).							
Prerequisites	Basic algebra (for linear programming), and advanced calculus (for nonlinear programming). Exchange students need to be aware that very specific pre-knowledge is required for this course. A solid background in mathematics is necessary. Students should be aware of the following concepts: Algebra: working knowledge of vector computing and matrices (including inverse matrices). Linear equations, and find the solutions of a set of equations etc. Function theory on the level of optimisation of functions of multiple variables under side conditions (Lagrange multipliers)							
Teaching methods	An advanced level of English. PBL / Lecture / Assignment							
Assessment methods	Written Exam							
Evaluation in previous academic year	For the complete evaluation of this course please click http://iwio-sbe.maastrichtuniversity.nl/rapporten.asp?referrer=codeUM							
This course belongs to the following programme / specialisation	Bachelor Econometrics and Operations Research				Year 2 Compulsory Courses			
	SBE Exchange Bachelor				Bachelor Courses			
	SBE Exchange Master				Bachelor Courses			
	SBE Non Degree Courses				Bachelor Courses
