## **Course Descriptions NonDegree 2017-2018**

Course Title Financial Research Methods

EBC4095 Course Code **ECTS Credits** 6.5

Whole/Half Grades Assessment

Period

Period End Mon Tue Wed Thu Fri 4-9-2017 27-10-2017 Х Χ Χ Χ 5-2-2018 6-4-2018 X

Level Intermediate/Advanced

Coordinator Rachel Pownall For more information:r.pownall@maastrichtuniversity.nl

Language of instruction **English** 

Goals

To equip students with the tools and techniques to learn how to conduct research using formal research methods. Students learn current research methodology related to undertaking research in financial markets through the use of statistical tools. The course is instrumental in preparing students for their Masters thesis. The course provides students with the correct approach and tools to conduct both academic as well as business research in a financial setting. It is an essential basis for writing a final thesis and for preparing students as researchers in a professional business environment. The course is designed for Finance students

Description

The course begins with an opening lecture. The following tutorial meetings cover standard research theory (such as research philosophies, developing theories and issues of causality). The importance of good research methods is introduced directly using empirical financial data. Students are introduced to data modelling and statistical inference (using either Stata or Matlab software), considered to be highly relevant for Finance students during computing classes. Students are evaluated on the basis of a final research paper (approx. 15 pages), presentations, discussions and general participation during tutorials and computing

classes.

Literature Required literature:

Boffelli, S. and Urga, G., 2016. Financial Econometrics using Stata, Stata Press, Texas, US.

ISBN-13: 978-1-59718-214-0

Articles from financial journals

Additional literature:

Ryan, B., Scapens, R.W., and Theobald, M., 2002, Research Method and Methodology in Finance and

Compulsory Courses

Accounting, Thomson, London, UK

Greene, W.H., 2003, Econometric Analysis, 5th edition, Pearson Education, Inc., New Jersey, USA

Prerequisites Quantitative Methods

Finance 1.5

Teaching methods PBL / Presentation / Lecture / Assignment / Groupwork
