Language of instruction

This skill introduces students to evaluate and assess the impact and success of sustainable business Goals

practices from different perspectives of a company.

Description The best business ideas are the best... because they have proven themselves to be exactly that. But how do

you prove the success of sustainable business practices, aimed at furthering an objective (e.g., the environment, labor practices, gender equality) that does not necessarily support the firm's bottom line? Do they achieve their objectives, and how do they contribute to that bottom line? In this skill, you will learn (i) that the correct method used to answer these questions depends very much on the type of business; (ii) that the success of sustainable business practices varies (and why); (iii) how to assess the relationship between firms' bottom line (sales, profits, market share) and their focus on sustainability. The emphasis on the course is on real-life data cases, which cover areas such as equities, corporate debt, microfinance, charitable giving and

crowdfunding. To be announced

Exchange students need to have taken at least one introductory business course and one quantitative Prerequisites

methods course including basic statistics and regression analysis and have an advanced level of English.

Keywords

Literature

Teaching methods Assignment / Groupwork

Assessment methods Attendance / Participation / Written Exam
