The development of new products, services and processes is predominantly carried out in project groups. That means that people from different sectors of the organisation are brought together on a temporary basis to accomplish a complex task. The project management part of this course offers an insight in the role of project management in different organisational contexts. Special attention is given to the following issues: project selection, the project manager, project planning, resource allocation and project control. The process management part of this course deals with operation, strategy and process management. We define a process to be any transformation that converts inputs to outputs. The process view considers any organization to be a process that consists of interconnected sub processes. In this part of the course we will provide students with the basic concepts that enables them to describe processes in a way that allows them to apply "management levers" on those processes: process flow time, work-in-process, process-efficiency and so forth.
