Level	Intermediate/Advanced																
Coordinator	Denis de Crombrughe For more information:d.decrombrughe@maastrichtuniversity.nl																
Language of instruction	English																
Goals	<p>(1) Thorough understanding of standard econometric models and methods for the analysis of independent data; independent data are typically cross-sectional, as opposed to time series which are sequential and generally serially dependent.</p> <p>(2) Additionally, some practical experience with the application of the methods, the interpretation of the models, and the evaluation of inferences.</p> <p>(3) In particular, providing background and warming up for students about to write a Bachelor thesis on an empirical topic.</p>																
Description	<p>PLEASE NOTE THAT THE INFORMATION ABOUT THE TEACHING AND ASSESSMENT METHOD(S) USED IN THIS COURSE IS WITH RESERVATION. THE INFORMATION PROVIDED HERE IS BASED ON THE COURSE SETUP PRIOR TO THE CORONAVIRUS CRISIS. AS A CONSEQUENCE OF THE CRISIS, COURSE COORDINATORS MAY BE FORCED TO CHANGE THE TEACHING AND ASSESSMENT METHODS USED. THE MOST UP-TO-DATE INFORMATION ABOUT THE TEACHING/ASSESSMENT METHOD(S) WILL BE AVAILABLE IN THE COURSE SYLLABUS. The course is designed as a follow-up to the second-year course Econometric Methods I (EBC2111), reviewing known methods somewhat more formally before introducing the new ones. The following topics will be covered.</p> <p>(1) The Normal regression model and Maximum Likelihood (ML)</p> <p>(2) Endogeneity and Instrumental Variable (IV) methods</p> <p>(3) Generalised Method of Moments (GMM)</p> <p>(4) Discrete choice models (LPM, logit, probit etc.)</p> <p>(5) Censoring and selection (tobit, heckit)</p> <p>(6) Linear equation systems (SURE, SEM)</p> <p>(7) Panel data models (POLS, FE, RE, FD ...).</p> <p>These topics will be treated at a fairly rigorous level, starting from abstract assumptions about a multivariate world described in terms of vectors and matrices.</p>
