Over the past decade, purchasing has won a reputation in many executive boardrooms as a powerful tool for improving profitability and competitive advantage. Strategies that purchasing develops are increasingly considered to assist in achieving the organization's overall goals and objectives, it is no longer unusual that purchasing managers report directly to the board of directors, or are even member of this board as Chief Purchasing Officers (CPO). Purchasing Management may also significantly impact upon the value creation of the firm through the early involvement of suppliers in, for example, new product development. This course studies how to set up and strategically manage the purchasing function of a firm. In this course, the evolving role of purchasing in large and international firms is examined in detail. The objective is to provide students with a sound conceptual understanding of the challenges faced by purchasing managers in large and international firms. Specifically, this course will focus on the strategic and tactical aspects of purchasing and supply management, such as Strategic sourcing (f.e. supplier selection, contracting), Buyer-Supplier Relationships, Digital Procurement, Co-innovation with suppliers. The course is focused not only on manufacturing, but also on service industries, and looks at sourcing both of products and services.</p>
