Course Title IT Project Management
 Course Code EBC4118
 ECTS Credits 6,5
 Assessment None

Period	Start	End	Mon	Tue	Wed	Thu	Fri
4	3-2-2014	4-4-2014	X/E			X/E	

Level Intermediate/Advanced
 Coordinator Brent Furneaux For more information:b.furneaux@maastrichtuniversity.nl
 Language of instruction English
 Goals

This course introduces students to the field of project management with particular emphasis on the management of information technology (IT) projects. Students will develop an understanding of the most common processes, tools, techniques, and theories applied to the management of IT and non-IT projects. Traditional and emerging methods for the management of IT specific projects will also be explored. This exploration is intended to provide students with a greater understanding of how they can address some of the unique challenges associated with IT projects. Advanced topics will also be introduced throughout the course to foster greater depth of understanding, to challenge students to think about established issues in new ways, and to highlight gaps in our current understanding. As part of the process of preparing to conduct independent research, it is further expected that students will develop an improved ability to understand and critique research published in the field of project management.

Key Learning Objectives

Develop an understanding of key project management concepts and principles including those associated with the planning, execution, and monitoring of projects
 Develop familiarity with some of the key findings reported upon in recent project management literature
 Acquire skills in the preparation of project management plans, progress evaluations, and risk identification and response efforts
 Improve ability to recognize and describe important information system development methodologies and determine their suitability to particular circumstances
 Acquire knowledge concerning some of the tools available to support project management activities
 Improve ability to recognize and effectively address threats to project success

Description This course introduces students to a wide range of tools and techniques that are routinely employed by practicing project managers to help them overcome the well known challenges of completing projects on time and budget. As such, it includes numerous opportunities to apply the methods discussed to practical situations encountered during the key stages of the project management process. Such efforts are intended to foster greater appreciation for both the value and the limitations of these methods.

Literature Jeffrey K. Pinto Project Management: Achieving competitive advantage plus selected readings from academic literature.

Prerequisites There are no specific prerequisites for the course since it is expected that Master level students will have the general math and other skills needed for success.

Teaching methods PBL / Presentation / Lecture / Assignment / Groupwork

Assessment methods Participation / Written Exam
