Description	<p>The aim of this course is to introduce accounting to students. Accounting comprises financial accounting and management accounting. Both forms of accounting rely on information extracted from the financial information system. Recent accounting scandals in companies like Enron, Parmalat and Ahold have illustrated the importance of providing reliable information about the performance of a company. In this course, we focus on management accounting. However, as financial statements are the key source of information for both financial and management accountants, we will first briefly discuss the methods that financial accounting uses to produce an annual report. In discussing the subject of management accounting, which has an internal focus (like managers and the board of directors), we will concentrate on the value of management accounting information for the internal decision-making process.</p>
