Course Descriptions None 2014-2015

Course Title	Programming
Course Code	EBC2016
ECTS Credits	6,5
Assessment	None

Period

Period	Start	End	Mon	Tue	Wed	Thu	Fri
2	27-10-2014	19-12-2014	L	X		X	

Level	Intermediate
Coordinator	Rudolf Müller For more information:r.muller@maastrichtuniversity.nl
Language of instruction	English
Goals	Students learn to design and implement algorithms in the programming language C++. They learn all basic concepts of the C++ programming language, including the implementation of simple classes and the usage of abstract data types as provided in the standard class library. Finally they learn the impact of the choice of data structures on the running time of an algorithm, and how to solve simple combinatorial optimisation problems.
Description	In the first part of the course students apply basic concepts of the C++ programming language, including functions, selection structures, repetition and loop statements, data structures, and user-defined classes, in order to solve small programming tasks. In the second part the emphasis will be on how to analyse a programming task, how to design a solution and how to transform the solution into a C++ program. Students get to know sorting algorithms and heuristics for simple combinatorial optimisation problems.
Literature	Frank L. Friedman, Elliot B. Koffman, Problem Solving, Abstraction and Design Using C++, 6th edition, Pearson Addison-Wesley, 2010
Prerequisites	Analysis I, Linear Algebra, Optimisation, strong mathematical skills.
Teaching methods	PBL / Lecture / Assignment / Groupwork
Assessment methods	Participation / Written Exam
