Language of instruction English

Goals Students will practice managerial skills and mathematical/statistical methods necessary to optimize the decisions involved in product development and management of operations.

Description Every year, companies launch thousands of new products. Many firms consider innovation the lifeblood of their business although failure rates of up to 80% are not uncommon. In this course we study what it takes to successfully develop products and bring them to the market. Specifically, we discuss how companies can translate customers' needs into product concepts, and how they can produce and supply the new products in a cost-efficient yet customer-oriented manner. The course addresses the strategic, marketing, and operational decisions that lie at the core of this process.

Literature Management of Operations and Product Development. Prep. by A. Grigoriev and B. Foubert (Maastricht University). McGraw-Hill Custom Publishing.

Prerequisites Basic mathematics and statistics, general marketing concepts, basic finance. An advanced level of English.
