Coordinator	Thijs Jansen For more information:m.jansen@maastrichtuniversity.nl																								
Language of instruction	English																								
Goals	<p>Learn the concepts and techniques in the field of integral calculus that are prerequisite for 'probability theory', '(applied) statistics', 'mathematical economics' and 'operations research'.</p> <p>Can check the topological properties of a subset of the plane.</p> <p>Know how to prove that a function of two variables is continuous.</p> <p>Be able to apply the Implicit Function of Theorem.</p> <p>Know how to prove that a function of two variables has a directional derivative or is (totally) differentiable.</p> <p>Learn to solve constrained and unconstrained optimisation problems.</p>																								
Description	Functions of more than one variable, series, multiple integrals, integral calculus of functions of one variable.																								
Literature	Syllabus.																								
Prerequisites	<ul style="list-style-type: none"> - Differential calculus for functions of one variable (as, for instance, in the course Analysis 1). - Elementary linear algebra (as, for instance, in the course Linear Algebra). An advanced level of English.																								
Teaching methods	Lecture / Assignment																								
Assessment methods	Written Exam
