| Course Title | Quantitative Methods II (IB) | | | | | | | |
| Course Code | EBC1033 | | | | | | | |
| ECTS Credits | 6,5 | | | | | | | |
| Assessment | Pass / Fail | | | | | | | |
| Period | Period | Start | End | Mon | Tue | Wed | Thu | Fri |
| | 4 | 6-2-2017 | 7-4-2017 | L | | X/E | X/E | L |
| Level | Intermediate | | | | | | | |
| Coordinator | Christian Kerckhoffs For more information:c.kerckhoffs@maastrichtuniversity.nl | | | | | | | |
| Language of instruction | English | | | | | | | |
| Goals | <p>Introduction to the matrix representation of (linear) systems of equations, and to the modelling of linear programming problems.</p> <p>Introduction to the basic tools of inferential statistics, a.o. the independent-samples t-test, the paired-sample t-test, one-way-ANOVA, the chi-square test and regression analysis.</p> | | | | | | | |
| Description | <p>QM II continues the quantitative topics that were initiated in QM I: mathematics and statistics. There is no separate formal training in (or testing of) computer science: this element has been integrated into the remaining two parts of the course.</p> <p>In the mathematics part, we will expand the analysis of functions and (systems of) equations. Issues that will be addressed are:</p> <ul style="list-style-type: none"> - A collection of tools often used in finance but also in other fields (buzzwords: interest rates, present value, discounting, and geometric series). - The matrix representation of systems of linear equations (so called linear algebra) will be introduced and supplemented by the concepts of determinants and inverse matrices, which are important tools to manipulate such systems. <p>All these topics will be introduced and illustrated using economic or business applications.</p> <p>In the second half of the course, we introduce the mathematical programming approach to solving decision problems in business.</p> <p>The analysis will focus on the variety of business decision problems that can be modelled as linear programming models. The emphasis is on modelling, while finding the optimal solution is left to the computer.</p> <p>In the statistics part, we will expand the coverage of inferential statistics, i.e. how to draw conclusions about a population based on a sample. Students will learn to apply the basic tools of inferential statistics (confidence intervals and hypothesis tests) to examine a large array of questions that may occur in economics or business. We will focus on the following topics:</p> <ul style="list-style-type: none"> -How to examine whether the mean of some quantitative variable (e.g. income) differs between two or more populations (e.g. men vs. women). Related to this, we will also examine what to do when the data are paired, and when the variable of interest is a proportion. -How to analyse relationships between qualitative variables (e.g. between brand preference and gender). -How to analyse relationships between two or more quantitative variables (e.g. between income and age) using regression analysis. This is one of the most frequently used statistical techniques in economics and business. <p>All these issues will involve the use of real-life data, which will be analysed using EXCEL.</p> | | | | | | | |
| Literature | <p>Sharpe, Norean D., De Veaux, Richard D., & Velleman, Paul F. (2015), Business Statistics, 3rd ed., New York: Pearson Education International.</p> <p>QM1 + QM2 mathematics reader, to be downloaded on Eleum.</p> | | | | | | | |
| Prerequisites | <p>Basic knowledge of mathematics and statistics, comparable to the course Quantitative Methods I, code EBC1005/1006/1007.</p> <p>Exchange students must have attended a course similar to QM1 at their home university.</p> | | | | | | | |
| Teaching methods | PBL / Lecture / Assignment | | | | | | | |
| Assessment methods | Written Exam | | | | | | | |
