 Language of instruction English

Goals The primary goal of this course is for the students to learn how to do empirical work on emerging economies. In particular, the students will learn how to (empirically) compare emerging economies to rich and poor countries, in order to understand how these economies do or do not differ from others. The students will also gain a basic knowledge of the causes and consequences of economic growth in rapidly evolving economies, as well as an understanding of the international economic relations of these economies.

Description This course analyses the long-run development and international economic relations of emerging economies. The long-run part deals with economic growth, population growth, education decisions and systems, interactions between public health and growth, domestic savings and investment, sustainability in regard to the natural environment and other resources. The international relations part relates growth to migration, aid, foreign investment and foreign debt, with the latter including financial crises. It also covers international trade and trade policy, with particular emphasis placed on the 'Asian miracle'. The course is empirically oriented, and the students will compare emerging economies to rich and poor countries, in order to learn where emerging economies differ from, and where they are similar to other countries.

Literature Michael P. Todaro and Stephen C. Smith, (2015) Economic Development, 12th Edition, Pearson.

Prerequisites Basic course knowledge in micro-, macro- and international economics.

Keywords

Teaching methods PBL / Presentation / Assignment / Groupwork

Assessment methods Final Paper / Participation / Written Exam
