

Course Descriptions None 2018-2019

Course Title Market Design
Course Code EBC4242
ECTS Credits 5,0
Assessment None

Period	Start	End	Mon	Tue	Wed	Thu	Fri
5	15-4-2019	7-6-2019	X		X		

Level Advanced

Coordinator Christian Seel For more information:c.seel@maastrichtuniversity.nl

Language of instruction English

Goals The first goal is to become familiar with key theories of market design, including aspects of matching theory, implementation theory, auctions, and mechanism design. The second goal to study prominent real life examples of market design.

Description Many markets have evolved spontaneously, shaped by various economic forces. This course is devoted to markets that have instead been created, engineered, or designed. Online auctions such as eBay is one example of such markets. Another group of examples are the mechanisms designed to allocate students to universities or children to schools. Such markets and mechanisms have been designed to serve a specific goal. Thus online auctions usually serve the purpose of revenue maximization. University admission mechanisms strive to attain a stable and fair matching of students to universities. The course covers aspects of matching theory, implementation theory, auctions, and mechanism design. These ideas are illustrated by prominent examples of market design such as the Boston mechanism of school choice and spectrum auctions.

Literature

Prerequisites Advanced Microeconomics (EBC4232) or equivalent.

Keywords

Teaching methods PBL / Lecture / Assignment

Assessment methods Participation / Written Exam
