

Course Descriptions None 2021-2022

Course Title Mathematical Analysis

Course Code EBC1043

ECTS Credits 6,5

Assessment Whole/Half Grades

Period	Start	End	Mon	Tue	Wed	Thu	Fri
1	30-8-2021	15-10-2021		X		X	

Level no level

Coordinator Stan van Hoesel, Andrés Perea y Monsuwé For more information:s.vanhoesel@maastrichtuniversity.nl; a.perea@maastrichtuniversity.nl

Language of instruction English

Goals * Students provide proof of the ability to use mathematical tools to build and develop mathematical models.

* Students provide proof of the ability to use mathematical tools to solve models.

Description This course offers a wide range of interesting calculus and linear algebra techniques, which are almost indispensable for Big Data applications. The topics discussed in the first part of the course include, among others, limits, continuity, differentiation and specific functions derivatives, partial derivatives, gradients and series. In the second part of this course, students will be introduced to concepts of linear algebra from an algebraic and geometric point of view. Emphasis is given to topics that will be useful in other disciplines, including systems of equations, linear transformations, vector spaces, matrix arithmetic, determinants and eigenvalues. You will also learn some applications like the idea behind Google PageRank and its connection with eigenvalues, and you can also apply similar techniques for ranking sport teams or universities. The subject areas covered in this course are fundamental for the mathematical aspect of data science and for most branches of mathematics and engineering sciences. Both the intuition behind the concepts and their formal definitions will be presented along with simple examples of formal mathematical proofs.
