Course Descriptions None 2022-2023

Course Title	Analysis II
Course Code	EBC1032
ECTS Credits	6,5
Assessment	Whole/Half Grades

Period

Period	Start	End	Mon	Tue	Wed	Thu	Fri
4	6-2-2023	31-3-2023	X		X		
5	17-4-2023	9-6-2023	X		X		

Level	Intermediate
Coordinator	Janos Flesch For more information:j.flesch@maastrichtuniversity.nl
Language of instruction	English
Goals	* Students learn the concepts and techniques in the fields of integral calculus and differential equations. * Students can apply the solution methods to calculate integrals and solve differential equations. * Students can find and validate the right method to solve the mathematical problem. * Students learn the concepts and techniques and can calculate the convergence interval for infinite series. * Students learn for functions of two variables the concepts of continuity and differentiability, the implicit function theorem, and their implications. * Students can show that a function is continuous, calculate its derivative, and apply the implicit function theorem. * Students learn the definition and solution methods and their application for unconstrained and constrained optimization problems for functions of two variables. * Students can explain their mathematical arguments clearly and discuss their solutions for the mathematical problems in small groups.
Description	PLEASE NOTE THAT THE INFORMATION ABOUT THE TEACHING AND ASSESSMENT METHOD(S) USED IN THIS COURSE IS WITH RESERVATION. A RE-EMERGENCE OF THE CORONAVIRUS AND NEW COUNTERMEASURES BY THE DUTCH GOVERNMENT MIGHT FORCE COORDINATORS TO CHANGE THE TEACHING AND ASSESSMENT METHODS USED. THE MOST UP-TO-DATE INFORMATION ABOUT THE TEACHING/ASSESSMENT METHOD(S) WILL BE AVAILABLE IN THE COURSE SYLLABUS. The course Analysis II provides a more advanced study of mathematical analysis, including a rigorous introduction to integration, infinite series, differential equations, functions of more variables, multivariate calculus, and their applications to unconstrained and constrained optimization. The theory, concepts, tools and methods that are covered during the course are essential and heavily applied in problems arising in econometrics, mathematical economics and operations research.
Literature	Reader.
Prerequisites	- Differential calculus for functions of one variable (as, for instance, in the course Analysis 1). - Elementary linear algebra (as, for instance, in the course Linear Algebra). An advanced level of English.
Teaching methods	Lecture / Assignment
Assessment methods	Written Exam
Evaluation in previous academic year	For the complete evaluation of this course please click http://iwio-sbe.maastrichtuniversity.nl/rapporten.asp?referrer=codeUM

This course belongs to the following programme / specialisation

Bachelor Econometrics and Operations Research	Year 1 Compulsory Course(s)
