

Course Descriptions None 2023-2024

Course Title	Life Insurance II																
Course Code	EBC4120																
ECTS Credits	6,5																
Assessment	Whole/Half Grades																
Period	<table border="1"> <thead> <tr> <th>Period</th> <th>Start</th> <th>End</th> <th>Mon</th> <th>Tue</th> <th>Wed</th> <th>Thu</th> <th>Fri</th> </tr> </thead> <tbody> <tr> <td>5</td> <td>15-4-2024</td> <td>7-6-2024</td> <td>X</td> <td></td> <td></td> <td>X</td> <td></td> </tr> </tbody> </table>	Period	Start	End	Mon	Tue	Wed	Thu	Fri	5	15-4-2024	7-6-2024	X			X	
Period	Start	End	Mon	Tue	Wed	Thu	Fri										
5	15-4-2024	7-6-2024	X			X											
Level	Advanced																
Coordinator	Jan Christopher Kops For more information:j.kops@maastrichtuniversity.nl																
Language of instruction	English																
Goals	To become acquainted with statistical models that can be used in life insurance.																
Description	The course provides students with statistical models that are useful in life insurance (many of these models are also used in other fields that are concerned with future lifetimes of individuals or groups such as biostatistics, epidemiology or public health planning). We first discuss methods to model mortality rates for a larger group or an entire population. A particular focus is on the Lee-Carter model and its extensions. We also learn how to estimate these models. Afterwards we turn to models that are appropriate to model the future lifetime of individuals. A focus will be on models that can incorporate covariates such as parametric regression models, the Cox model and the accelerated failure time model. We also address the multiple decrement model. Subsequently, we discuss how these models can be used to set premiums for life insurance products. In the last part of the course we introduce a model that allows to calculate premiums for insurances that may provide benefits depending on the current status of the insured. As part of the course students will also apply the methods introduced to real data.																
Literature	Research articles, the slides of the course.																
Prerequisites	Probability Theory and Mathematical Statistics.																
Teaching methods	PBL / Presentation / Lecture / Assignment																
Assessment methods	Final Paper / Participation / Written Exam																
Evaluation in previous academic year	For the complete evaluation of this course please click http://iwio-sbe.maastrichtuniversity.nl/rapporten.asp?referrer=codeUM																
This course belongs to the following programme / specialisation	<table border="0"> <tr> <td>Master Business Research - Operations Research</td> <td>Elective Course(s)</td> </tr> <tr> <td>Master Econometrics and Operations Research</td> <td>Elective Course(s)</td> </tr> <tr> <td>Master Economic and Financial Research - Econometrics</td> <td>Elective Course(s)</td> </tr> <tr> <td>Master Economic and Financial Research - No specialisation</td> <td>Elective Course(s)</td> </tr> <tr> <td>SBE Exchange Master</td> <td>Master Exchange Courses</td> </tr> <tr> <td>SBE Non Degree Courses</td> <td>Master Courses</td> </tr> </table>	Master Business Research - Operations Research	Elective Course(s)	Master Econometrics and Operations Research	Elective Course(s)	Master Economic and Financial Research - Econometrics	Elective Course(s)	Master Economic and Financial Research - No specialisation	Elective Course(s)	SBE Exchange Master	Master Exchange Courses	SBE Non Degree Courses	Master Courses				
Master Business Research - Operations Research	Elective Course(s)																
Master Econometrics and Operations Research	Elective Course(s)																
Master Economic and Financial Research - Econometrics	Elective Course(s)																
Master Economic and Financial Research - No specialisation	Elective Course(s)																
SBE Exchange Master	Master Exchange Courses																
SBE Non Degree Courses	Master Courses
