| Language of instruction | English |
| Goals | The programme is completed by a Master Thesis Project in which you conduct an in-depth study of a supply chain related topic. It provides you with the opportunity to apply your knowlege and skills acquired during the programme to one specific supply chain problem. |
| Description | In several sessions, students are guided towards a thesis proposal that offers a solid base to enter the thesis process. Finding a topic, formulating an interesting and workable problem statement, imposing a structure by formulating sub questions, reporting on a first scan of the literature, and finally developing initial research ideas are all covered in these sessions. The skills training is concluded by a session in which all participants give a presentation of their thesis proposal, receiving critical feedback from other students and the tutor. |
| Literature | The literature will be announced later. |
| Prerequisites | Students who wish to start their thesis must have followed at least two courses. |
