

## Course Descriptions None 2023-2024

Course Title Causes and Consequences of Systemic Risk  
 Course Code EBC4273  
 ECTS Credits 6,5  
 Assessment Whole/Half Grades

Period	Start	End	Mon	Tue	Wed	Thu	Fri
2	30-10-2023	15-12-2023	X		X		

Level Intermediate/Advanced

Coordinator Peter Werner, Mark Sanders For more information: [p.werner@maastrichtuniversity.nl](mailto:p.werner@maastrichtuniversity.nl); [m.sanders@maastrichtuniversity.nl](mailto:m.sanders@maastrichtuniversity.nl)

Language of instruction English

Goals The goal of this course is that students:  
 \* understand the dynamics of cooperation in providing public goods and managing global commons;  
 \* understand the nature and measurement of fundamental types of economic preferences (risk and time preferences) and their role for shaping policies related to global commons and systemic societal risks;  
 \* can combine economic theory and empirical/experimental methods to assess the effectiveness of public policy/corporate strategy related to global commons and financial crisis;  
 \* can operationalize this knowledge to design institutions and policy interventions to mitigate free-rider and moral hazard problems.

Description In this course, we analyze the central concepts that lead to problems of unsustainability and fragility. To let students experience how individual behavior can collectively drive people and systems towards unsustainable and vulnerable states, where common resources are exhausted and collapse, competition erodes redundancies and systemic risks build up, we start with playing the 'fish bank' game. Subsequently, we introduce the concepts of risk versus uncertainty and move to dynamic intertemporal decision-making where issues like the appropriate discount rate, the budget constraint, and the formation of expectations emerge. Important concepts are asymmetric information, time inconsistency, self-fulfilling prophecies, and contagion. The course will then analyse how public and private risk management could be used to increase resilience and sustainability. The course will combine theoretical concepts with practical examples and empirical applications, which include preference elicitations, experimental methods, observational data, and statistical methods.

Literature Scientific articles and chapters from books

Prerequisites Basic understanding of economic concepts and theories (both microeconomics and macroeconomics) is assumed.

Keywords

Teaching methods PBL / Presentation / Lecture / Assignment / Papers / Groupwork

Assessment methods Final Paper / Presentation

This course belongs to the following programme / specialisation

Master Economics - Inequality and Social Inclusion	Elective Course(s)
Master Economics - Sustainable and Resilient Economies	Core Course(s)
Master Economics - Technology, Markets, and Societal Change	Elective Course(s)
Master Econometrics and Operations Research	Elective Course(s)
Master Financial Economics - Asset Pricing	Elective Course(s)
Master Financial Economics - Banking	Elective Course(s)
Master Financial Economics - Financial Analysis	Elective Course(s)
Master Financial Economics - No specialisation	Elective Course(s)
SBE Exchange Master	Master Exchange Courses
