

Course Descriptions None 2024-2025

Course Title Business Intelligence and Data Management

Course Code EBC4254

ECTS Credits 5,0

Assessment Whole/Half Grades

Period	Start	End	Mon	Tue	Wed	Thu	Fri
2	28-10-2024	15-12-2024	X			X	

Level Advanced

Coordinator Lars Rieser For more information:l.rieser@maastrichtuniversity.nl

Language of instruction English

Goals

- * Articulate the need for Business Intelligence in organizations and understand how organizational strategy influences BI architecture decisions
- * Understand the need for centralized data governance and how proper data governance is a necessary condition for successful BI
- * Demonstrate an understanding of the different types of databases implemented in organizations.
- * Understand the need for Information Security at the individual and organizational level
- * Evaluate real-life BI architectures/strategies and recognize strength and weaknesses of individual approaches

Description

In the course "Business Intelligence Systems" students learn about the myriad of ways organizations collect, store, manage and analyse data as well as the foundational technologies of the Big Data era. While talk of Big Data and its applications is dominating the headlines of the business press, many organizations struggle with organizing their corporate data and managing it in a strategic, efficient, and ethical manner. In this course students will become familiar with all aspects of the Business Intelligence lifecycle, ranging from the initial extract, transform and load (ETL) processes over data storage to the final end-user application. In doing so we will discuss about different database and file management systems but will also dedicate an equal amount of time to discussing aspects related to Business Intelligence architecture and Business Intelligence Strategy. The course is designed to give equal attention to the understanding of the technical and theoretical principles that underpin organizational Business Intelligence, as well as to the practical application of this knowledge. As such this course makes use of the case studies methodologies in which students are asked to apply their theoretical knowledge towards resolving real-life cases.

Literature Academic Articles, Case Studies (Harvard Business Cases)

Prerequisites

Keywords big data, data management, data governance

Teaching methods Lecture / Groupwork

Assessment methods Final Paper / Assignment / Presentation
