Language of instruction English

Goals After successfully finishing this course, students will be able to:
* Learn theoretical and methodological background on the relation between digital business strategies, digital investment, and economic performance;
* Understand the relation between digital initiatives and business transformation.
* Understand governance of digital resources
* Examine how to assess the business value of digital initiatives

Description The objective of this course is to understand the role of ICT on business performance and on sectoral and aggregate economic performance. It includes modelling techniques, measurement issues and methodological approaches to analyse the impact of ICT on business and economics. It has a special focus on data analysis and research methodologies. Moreover, as we will show, innovation at more levels, e.g. organisational innovations and organisational change is needed for ICT investments to be successful. Part of the course is to analyse and report on a real life example based on either firm level data (case study) or at a sectoral or more aggregate data.
