Topics that are covered include: the lifecycle, scheduling, risk management, change management, benefits management, and requirements management.. This exploration is intended to provide students with a greater understanding of how they can address some of the unique challenges associated with IT projects. Advanced topics will also be introduced throughout the course to foster greater depth of understanding, to challenge students to think about established issues in new ways, and to highlight gaps in our current understanding. The course is a mix of theory and practice: in the first weeks, the emphasis is on the theory of IT Project Management, whereas in the second half of the course, the focus for the students shifts to practicing what has been learned.</p>
