The first half of the course will focus on the theoretical and practical issues of designing and using relational databases, which are the foundation of most data management systems in Organisations. The concepts of relational databases will be the main emphasis of the course. However, the course will also cover non-relational models, such as dimensional solutions. The content of this part of the course will closely follow the mandatory literature for the course.</p> <p>The second part of the course will be dealing with new trends and approaches to problems in modern web-driven Organisations. The content of this part of the course is less analytical and more conceptual. During most tutorial meetings, exercises will be discussed. These exercises have to be prepared by all individual students. Working in teams or groups on these assignments is full acceptable, but in no way mandatory. In addition, each student will be involved in hosting two or three tutorial meetings. Finally, the course includes one group assignment which has to be prepared by subgroups of 3-4 students.</p>
