In collective decision-making (e.g., elections) the rules and procedures used to arrive at a decision may have a considerable impact on the final result. Different rules may lead to different decisions. In this course such rules are studied. In particular, desirable properties like Pareto-optimality and non-manipulability are investigated. Some topics are:
 - voting schemes for two alternatives, theorem of May;
 - voting schemes for more than two alternatives, score rules, veto rules;
 - Condorcet winners, dictatorial rules, anonymity, neutrality, positive association, impossibility theorems of Arrow, Gibbard and Satterthwaite;
 - location problems;
 - strategy-proof division;
 - implementation.
