

## Course Descriptions Bachelor 2022-2023

Course Title	Sustainability and Social-Ecological Systems							
Course Code	EBC2187							
ECTS Credits	5,0							
Assessment	Whole/Half Grades							
Period	Period	Start	End	Mon	Tue	Wed	Thu	Fri
	1	5-9-2022	21-10-2022		X		X	
Level	Intermediate/Advanced							
Coordinator	Yvonne van der Meer, Andrew Oringer For more information:yvonne.vandermeer@maastrichtuniversity.nl; a.oringer@maastrichtuniversity.nl							
Language of instruction	English							
Goals	<p>Students are able to:</p> <ul style="list-style-type: none"><li>* understand key terms, concepts and principles related to (social-ecological) systems-thinking;</li><li>* understand the complexities of (coupled) social-ecological systems;</li><li>* apply system's thinking to key sustainability challenges, such as climate change, sustainable food systems and biobased/circular production systems;</li><li>* reflect on the potential of interdisciplinary knowledge and understanding in the pursuit of sustainable social-ecological systems.</li></ul>							
Description	<p>PLEASE NOTE THAT THE INFORMATION ABOUT THE TEACHING AND ASSESSMENT METHOD(S) USED IN THIS COURSE IS WITH RESERVATION. A RE-EMERGENCE OF THE CORONAVIRUS AND NEW COUNTERMEASURES BY THE DUTCH GOVERNMENT MIGHT FORCE COORDINATORS TO CHANGE THE TEACHING AND ASSESSMENT METHODS USED. THE MOST UP-TO-DATE INFORMATION ABOUT THE TEACHING/ASSESSMENT METHOD(S) WILL BE AVAILABLE IN THE COURSE SYLLABUS.</p> <p>Central to the pursuit of sustainable development is the integrated consideration of economic, social and environmental aspects. However, traditional scientific paradigms are based on reductionist thinking, which tries to understand things by taking them apart. In sustainability science, systems thinking is key to address the complex and interdependent nature of our coupled social-ecological systems.</p> <p>Many people recognize the need to transition to a sustainable and resilient society, but this requires new ways of thinking about and addressing complex problems. Widespread adoption of systems thinking is believed to be a precondition for making real progress towards sustainability, but few understand its' importance. Systems thinking is a process for understanding the interrelationships among the key components of a system.</p> <p>This course will introduce students to systems thinking and how it can be applied to understand sustainability problems and challenges of coupled social-ecological systems. Students will also become acquainted with (quantitative) sustainability impact assessment. After familiarizing themselves with key concepts, students will explore systems thinking across two areas:</p> <ul style="list-style-type: none"><li>* Earth systems and coupled social-ecological systems: Students will explore biogeochemical cycles; climate systems feedbacks and climate tipping points; interlinkages between the climate systems and our food systems; resilience and adaptive sustainable food systems.</li><li>* Rethinking production systems: Students will explore the transition to a biobased and circular economy through topics like materials from renewable resources, renewable energy systems, plastic waste scenarios, design for recycling, circularity concepts and energy in the built environment.</li></ul>							
Literature	Reference list will be provided							
Prerequisites	None							
Keywords								
Teaching methods	PBL / Presentation / Lecture / Assignment / Groupwork							
Assessment methods	Final Paper / Assignment / Presentation / Take home exam							
Evaluation in previous academic year	For the complete evaluation of this course please click <a href="http://iwio-sbe.maastrichtuniversity.nl/rapporten.asp?referrer=codeUM">http://iwio-sbe.maastrichtuniversity.nl/rapporten.asp?referrer=codeUM</a>							
This course belongs to the following programme / specialisation	UM-wide minors			Minor Sustainability				
	SBE Non Degree Courses			Minor Sustainability
