

Course Descriptions Bachelor 2023-2024

Course Title	Materials Engineering																
Course Code	BENC1007																
ECTS Credits	5,0																
Assessment	Whole/Half Grades																
Period	<table><tr><td>Period</td><td>Start</td><td>End</td><td>Mon</td><td>Tue</td><td>Wed</td><td>Thu</td><td>Fri</td></tr><tr><td>5</td><td>15-4-2024</td><td>7-6-2024</td><td>X</td><td></td><td>X</td><td>X</td><td>L</td></tr></table>	Period	Start	End	Mon	Tue	Wed	Thu	Fri	5	15-4-2024	7-6-2024	X		X	X	L
Period	Start	End	Mon	Tue	Wed	Thu	Fri										
5	15-4-2024	7-6-2024	X		X	X	L										
Level	no level																
Coordinator	Niloofar Tahmasebi Birgani, Roman Truckenmüller For more information: z.tahmasebibirgani@maastrichtuniversity.nl; r.truckenmuller@maastrichtuniversity.nl																
Language of instruction	English																
Goals	The aim of the course is to instruct students in the fundamentals of materials science and engineering. The students will gain a better understanding of engineering and how it impacts our daily lives in various ways.																
Description	<p>This course will cover 6 learning objectives:</p> <ol style="list-style-type: none">1. Gain knowledge of materials classification and properties, of engineering, production and characterization methods as well as of various application areas2. Understand the relationship between the production of materials for different applications and the business processes needed to support the production3. Analyze a materials engineering problem and assess which expertise, materials, laboratory infrastructure and experiments are required to investigate and solve this problem in an efficient manner through scientific research4. Understand the complexity of the process of selecting, designing, producing and applying a material for an intended application5. Understand the global developments of the production process of materials6. Develop scientific knowledge in the field of materials engineering through study <p>To achieve these learning objectives, it is important to start this course with the understanding of the atomic structure and interatomic bonding in materials, because they form the basis for the classification of materials and for understanding of their properties. Different material classes (metals, ceramics, polymers, composites) will be studied and a large number of properties, including magnetic, electrical, thermal, optical, as well as mechanical properties will be thoroughly investigated for the different types of materials. Based on the gained theoretical knowledge students will be taught how to select the optimal material for a certain application and how these applications will impact businesses.</p> <p>The course follows the problem-based learning (PBL) approach. Characteristic of this approach is that learning is the result of an engaged interaction between academic staff and students, fueled by their experience and knowledge, with the objective of developing understanding and insights. Next to tutorial sessions, the course prepares for other Engineering courses and the projects in the curriculum. The course is structured including lectures, tutorials and a lab session (experimental).</p> <p>The assessment of the course has three components.</p> <ol style="list-style-type: none">1. Team report on a selected materials engineering topic (free to choose)2. Lab report on the exercises done in the lab3. Final examination (individual written exam), which consists of open questions and problems <p>Attendance of all tutorial meetings and the lectures is required.</p>																
Literature	* Materials Science and Engineering: An Introduction, 10th Edition, William D. Callister Jr., David G. Rethwisch, ISBN: 978-1-119-40549-8, January 2018																
Prerequisites	* To be a student enrolled in the BSc Business Engineering programme. * To be sufficient in English language (teaching and examinations will be conducted in English).																
Keywords	Materials, Metals, Ceramics, Polymers, Composite materials, Material structure and properties, Fabrication, Characterization, Applications																
Teaching methods	PBL / Lecture / Papers / Research																
Assessment methods	Written Exam / Assignment																
Evaluation in previous academic year	For the complete evaluation of this course please click http://iwio-sbe.maastrichtuniversity.nl/rapporten.asp?referrer=codeUM																
This course belongs to the following programme / specialisation	<table><tr><td>Bachelor Business Engineering</td><td>Year 1 Compulsory Course(s)</td></tr></table>	Bachelor Business Engineering	Year 1 Compulsory Course(s)
