| Goals   | <p>Learn and understand the basic economics of network technologies</p> <p>Understand formation and evolution of networks</p> <p>Learn difference between different network structures</p> <p>Learn about pricing and economics of network goods</p> <p>Understand issues relating network technologies and business strategies</p> <p>Understand effects of network technologies on competition and competition policy</p>   |           |          |     |                             |     |     |     |
| Description   | <p>The new economy is driven by dramatic changes in information and communication technologies — the computer, telecommunication technologies, the internet. These technologies, which are being integrated into every facet of the economy and society, are inherently network technologies. This course studies the micro-economics of networks, and the effects on the economy of the widespread diffusion of network technologies. Specific topics include the nature and scope of network externalities; the need for standards (both technical and cultural) and the nature of the standardisation process; path dependence; technological lock-in and escaping from lock-in; potential regret; issues in pricing the use of network technologies; the effects of different network architectures such as small worlds on economic performance. Various policy issues will also be addressed. The new information technologies have made it possible for agents in the economy to have different types of interactions with each other. For example, businesses can buy and sell using electronic trading technologies at the extreme, or simply using the internet to extend their reach to customers in ways that were previously impossible. All of this activity, though, draws on networks. There is the obvious one, namely that the internet (and the Web) is itself a network: the internet a physical network, the Web a network of linked information. Additionally, though, because of changes in the way information flows today, we have to think of agents more generally interacting over a more abstract kind of network of connections of various different kinds, as they operate in the economy. Virtual networks, or social networks form a more important aspect of economic life: firms have networks of suppliers with which they have long-lasting non-market relationships. Firms also have networks of other (non-supplier) firms for the same of gathering or creating information or knowledge about future technologies. The new economy depends on networks in many different ways, and this course aims to understand both networks per se, and networks as supporting different types of economic activity.</p> |           |          |     |                             |     |     |     |
| Literature  | No pre-assigned literature. We make use of recent journal articles.   |           |          |     |                             |     |     |     |
| Prerequisites   | <p>An intermediate level of economics is recommended. Exchange students should have a basic knowledge of microeconomics</p> <p>an advanced level of English</p>   |           |          |     |                             |     |     |     |
| Teaching methods  | PBL / Lecture / Assignment / Groupwork  |           |          |     |                             |     |     |     |
| Assessment methods  | Final Paper / Attendance / Participation / Written Exam   |           |          |     |                             |     |     |     |
| Evaluation in previous academic year                            | For the complete evaluation of this course please click <a href="http://iwio-sbe.maastrichtuniversity.nl/rapporten.asp?referrer=codeUM">http://iwio-sbe.maastrichtuniversity.nl/rapporten.asp?referrer=codeUM</a>   |           |          |     |                             |     |     |     |
| This course belongs to the following programme / specialisation | Bachelor Economics and Business Economics - Economics and Management of Information   |           |          |     | Year 2 Compulsory Course(s) |     |     |     |
